

8V Input , 300mA , Low power , CMOS LDO

Description

AF6206N series are a highly precise, lower consumption, 3 terminal, positive voltage regulators manufactured using CMOS and laser trimming technologies.

The AF6206N consists of a current limiter circuit, a driver transistor, a precision reference voltage and an error correction circuit. The current limiter is fold-back circuit operates as a short circuit protection as well as the output current limiter for the output pin. Output voltages are internally by laser trimming technologies.

Applications

- Portable consumer equipment
- Wireless handsets, Smart Phones
- Bluetooth, Digital cameras and Digital audio
- PDAs and other handheld products
